

High Power Film Capacitors

PPX General Description

PROTECTION

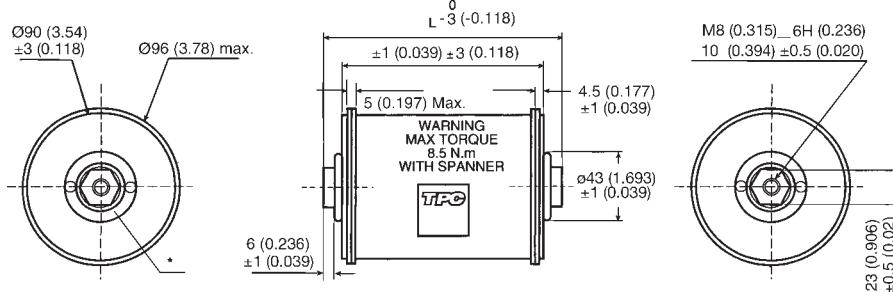

PPX capacitors are film foiled capacitors impregnated with synthetic oil (non-PCB) covering the peak voltage range, 4kVdc to 6kVdc.

For dry-wound (non-impregnated) G.T.O. snubbers in lower voltages see our FPX product line featured on page 43 or FPG product on page 47.

APPLICATIONS

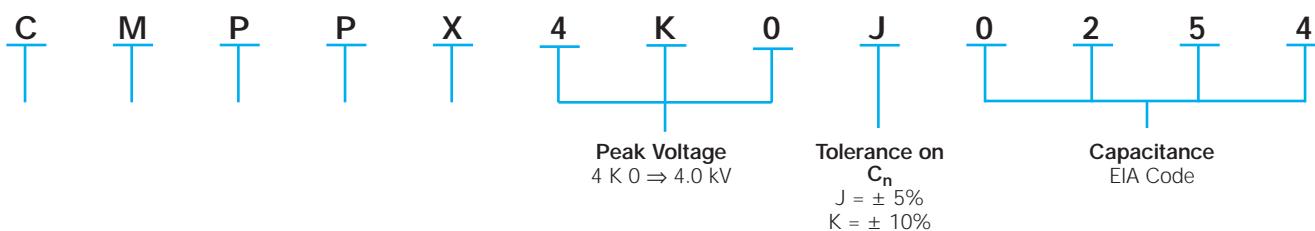

PPX capacitors are designed for the protection of gate turn-off thyristors (G.T.O.s) for operating in an air environment. Other applications are possible and available upon request.

Dimensions: mm (inches)

* The positions of the connections of each side are not indexed

PART NUMBER / HOW TO ORDER

ELECTRICAL CHARACTERISTICS

Capacitance range C_n	0.19 μ F to 6.4 μ F
Tolerance on C_n (possibilities of ±5% see specific requirements)	±10%
DC voltage range	3000 V / 3750 V / 4500 V
Peak voltages	4000 V / 5000 V / 6000 V
Allowable overvoltages	4500 V / 6000 V / 7500 V
Stray inductance	15 nH to 20 nH
Standard reference	Conforms with IEC 1071, IEC 68 and IEC 77
RMS test voltage between terminals V_t :	at 25°C during 10 s. See table of values
Maximum current:	I_{peak} max ≤ 5000 A
Insulation resistance:	$R_i \times C \geq 3000$ s
Parasitic series inductance:	See table of values
Tangent of loss angle:	See Curve 1

For lower power protection devices and further information please see pages 43-FPX, 47-FPG

High Power Film Capacitors

PPX Electrical Design

PROTECTION

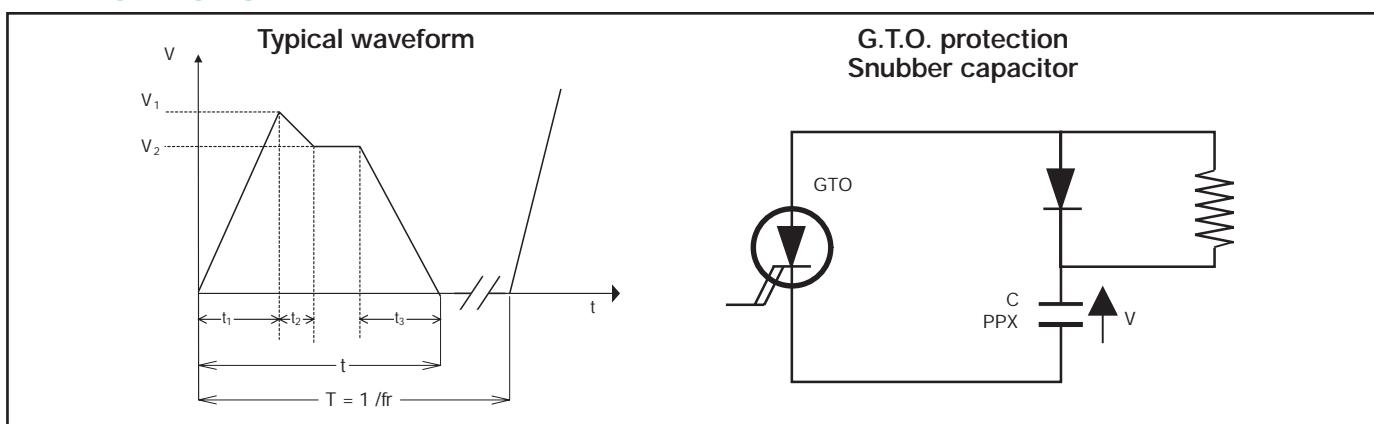

V_n DETERMINATION

The nominal DC voltage V_n and the peak voltage V are given in the tables.

The voltage must be chosen for:

$$V_1 \leq V_{\text{peak}}$$
$$V_2 \leq V_n$$

APPLICATIONS

MARKING

This information on the label:

- Logo
- Part number
- Capacitance and tolerance in clear
- Peak voltage
- Date of manufacture

CUSTOM PARTS

This catalog shows our standard product range. If your requirement is different from the values exhibited here, either mechanically or electrically, please contact your nearest AVX

representative for assistance. We offer a wide variety of custom and semi-standard solutions at reasonable cost.

PACKAGING

Hermetically sealed cylindrical gray polypropylene case. Axial connections to reduce stray inductance.

High Power Film Capacitors

PPX Thermal Design

PROTECTION

HOT SPOT TEMPERATURE

The total losses are calculated as follows:

$$P = 0.393C_n f_r [V_1^2 \operatorname{tg}_1(\delta) + (V_1 - V_2)^2 \operatorname{tg}_2(\delta) + V_2^2 \operatorname{tg}_3(\delta)]$$

where $\operatorname{tg}_1(\delta)$ at a frequency of $1/(2t_1)$

$\operatorname{tg}_2(\delta)$ at a frequency of $1/(2t_2)$

$\operatorname{tg}_3(\delta)$ at a frequency of $1/(2t_3)$

V_1, V_2 , in kV

C_n in μF

f_r in Hz

The hot spot temperature can be calculated with the formula:

$$\Theta_{HS} = \frac{2PR_{th1}R_{th2} + (\Theta_{op1} + \Theta_{op2}) \times R_{th1} + 2\Theta_{amb}R_{th2}}{2 \times (R_{th1} + R_{th2})}$$

where Θ_{HS} : Hot spot temperature in $^{\circ}\text{C}$

Θ_{amb} : Ambient temperature in $^{\circ}\text{C}$

Θ_{op} : Output temperature in $^{\circ}\text{C}$

R_{th1} : Thermal resistance between hot spot and ambient (given in the table of values)

R_{th2} : Thermal resistance between hot spot and output (given in the table of values)

P: Power in Watt

THERMAL CHARACTERISTICS

Minimum working temperature:

$\vartheta_{min} = -40^{\circ}\text{C}$

Maximum hot spot temperature:

$\vartheta_{HSmax} = 80^{\circ}\text{C}$

Please note that the hot spot temperature of 75°C corresponds to a lifetime expectancy of 100,000 hours. For each degree above 75 apply a decrease of lifetime of 10%.

Storage temperature:

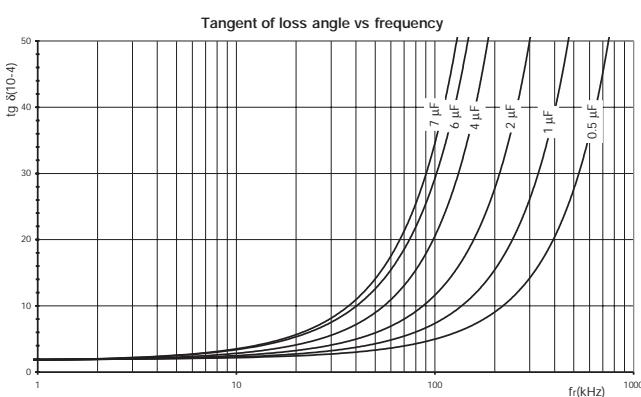

Range = $[-55^{\circ}\text{C} \text{ to } +85^{\circ}\text{C}]$

Normative measurement temperature:

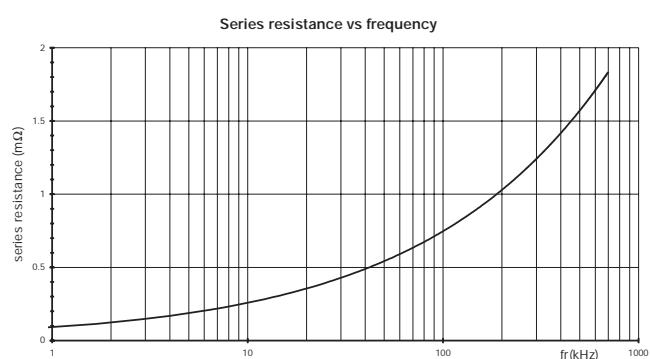

The capacitance value is given at

$\vartheta_{amb} = 25 \pm 10^{\circ}\text{C}$
